## RESEARCH STUDY TO TEST THE EFFECTIVENESS OF BIOPRO-CELLPHONE CHIPS ON THE STRESS RESPONSE TRIGGERED BY ELECTROMAGNETIC EMISSIONS FROM CELL-PHONES

#### **Study Location**

San Diego, California July 7, 8 2005

Medical Researcher Dr. S. McGregor, ND

**Testing Equipment** Biomeridian MSAS Professional (FDA Registered, ISO Certified)

### STUDY PURPOSE

To test the weakening and /or compensation of electromagnetic cell phone radiation (EMFs) on 7 key body (energy) systems when using the BIOPRO Cell Chip with the available series of measurements and testing devices.

## 1. INTRODUCTION

The suspicion that the influence of electromagnetic waves and fields emitted by televisions, radios, microwaves ovens, computers, cell phones, etc. have a negative, lasting impact on the human health system, has become – with an increasing number of worldwide studies – a virtual certainty. Many so called modern illnesses of today's civilization (in particular allergies) seem to be released and/or exaggerated by these electromagnetic influences.

According to the ARNDT-SCHULTZ-RULE, it is the weak and small doses that have particularly strong influences in their effect on biological systems, releasing clearly measurable reactions. After an accumulation of negative influences in the course of months or years, pre-pathological and ultimately pathological reactions can be observed and changes may occur in the human organism.

The rule applied to determine in tests,

- a) Whether and which causal influences have a changing effect on humans when exposed to the range of EMF-radiating technologies, and
- b) Which substantiating testing methods can be used when evaluating human energy systems, and are they suitable to show the qualitative and quantitative effects of such environmental influences (i.e. EMFs).

Many functional or energy screening devices, such as the BioMeridian MSAS Professional testing device used in this study are assessed on the research of Dr. Reinhold Voll. Dr. Voll established that there is a network of energy channels, called meridians, flowing through the body. Meridian points, some of which correlate to acupuncture points, can be used to collect energetic data. Dr. Voll demonstrated that the body's vital body systems are associated with different energy meridians. Imbalances in various vital body systems are believed to manifest themselves as energetic disturbances in the associated meridians. These energetic meridians are also highly responsive to external stressors, almost immediately, as illustrated by the testing equipment used in this study.

As sufficiently sensitive and reactive measuring points, 7 acupuncture systems with its meridians and points were chosen.

The points chosen were:

- Lymphatic system
- Lung
- Large Intestine
- Nervous System

- Circulation
- Allergy Response
- Cellular Metabolism

These points represent the condition of the entire human energy system and, within seconds, reflect physical reactions to the biophysical attractions (assuming these affect the body in a noticeable manner). Also, the body's compensatory reactions through homeostasis can immediately be measured and evaluated through these points.

## 2. MATERIAL AND METHODS

The Biomeridian MSAS Professional (an FDA registered and ISO certified device) which measures stress in over 60 different parts of the human body was used as the screening device. It is currently used by over 2,000 health practitioners in the U.S., Europe, Canada and many other parts of the world. This system is an important indicator of resistance to stress in essential bio-systems throughout the body.

In each of the 7 key body areas the test-subjects were measured on a data output scale of 0-100. The ideal target zone falls within the 45-55 score range. Practitioners say that any measurement above 55 is stressful as it indicates excess energy, or an inflamed condition in that part of the human biofield. Any measurement below 45 is also stressful because lower numbers represent impaired, weakened, or blocked energy systems. The closer an individual's measurements are to 50, the closer he/she is to actually being in his/her ideal performance zone. The individual screenings show the Meridian changes that took place in relation with exposure to the product being screened. A Samsung SPH-A620 Dual-band Tri-Mode cell phone was used for testing. The phone equipped with the BIOPRO Cell Chip had one chip attached to the back, approximately 1 inch below the antenna.

The following groups of 25 individuals were involved in the test:

15 Women 10 men

The measurement schedule was developed as follows:

Measurement 1 (M1):	Standard measurement. Base line (no cell phone used)
Measurement 2 (M2):	Active call without BIOPRO Chip applied.
Measurement 3 (M3):	Active call with BIOPRO Chip applied.

The average test measurements took approximately 5 to 7 minutes so as to negate the element of time compensation.

## 3. INDIVIDUAL TEST RESULTS

#### **Test Details:**

Initials of Test Subject:	S. L.
Date Tested:	July 8, 2005
Test Location:	San Diego, CA
Test Equipment used:	FDA-registered MSAS Professional
Credentials of Test Administrator:	Certified by Georgia State Naturopathic Medical
	Association; 10-plus years experience with performing
	MSAS Testing

#### Test Results:

S. L.	Lymphatic System	Lung	Large Intestine	Nervous System	Circulation	Allergy Response	Cellular Metabolism
Baseline (No Phone)	55	63	62	49	55	64	55
Phone Call without BIOPRO Cell Chip	60	63	64	44	59	65	60
Phone Call <b>with</b> BIOPRO Cell Chip	55	55	62	47	54	55	54

#### Test Findings:

#### 1. Baseline (No Phone):

When tested **without a cell phone** (baseline state), **4 of 7 (57%)** of this individual's key body areas measured **within the ideal performance zone**.

2. Phone Call without BIOPRO Cell Chip:

When using a cell phone without BIOPRO's Cell Chip attached to it, all 7 key body areas (100%) were in a weakened or stressed state. None of the key body areas were within the ideal performance zone.

#### 3. Phone Call with BIOPRO Cell Chip:

After applying the BIOPRO's Cell Chip on the phone, all 7 key body areas (100%) showed significant improvement, with 6 of 7 (86%) of them now measuring within the ideal performance zone. The 7<sup>th</sup> key area returned to its original baseline value.

Phone Call without BIOPRO Cell Chip	60	67	57	57	54	60	55
Phone Call <b>with</b> BIOPRO Cell Chip	55	55	56	53	54	54	53

#### **Test Findings:**

#### 1. Baseline (No Phone):

When tested without a cell phone (baseline state), 4 of 7 (57%) of this individual's key body areas measured within the ideal performance zone.

#### 2. Phone Call without BIOPRO Cell Chip:

When using a cell phone without BIOPRO's Cell Chip attached to it, **5 of 7 key body** areas (71%) were in a weakened or stressed state.

#### 3. Phone Call with BIOPRO Cell Chip:

**Test Results:** 

#### **Test Findings:**

1. Baseline (No Phone):

When tested without a cell phone (baseline state), 2 of 7 (29%) of this individual's key body areas measured within the ideal performance zone.

2. Phone Call without BIOPRO Cell Chip:

When using a cell phone without BIOPRO's Cell Chip attached to it, 7 of 7 key body areas (100%) were in a weakened or stressed state.

3. Phone Call with BIOPRO Cell Chip:

## 4. CONCLUSIONS

When tested **without a cell phone** (baseline state), across all individuals tested, **57%** of their key body areas measured **within the ideal performance zone**, **43%** of the key body areas measured **outside of the ideal range**.

As a result of our second measurement apparently the influence of EMFs from cell phone resulted in a significant, measurable shift in the energy levels in most acupuncture points. When using a cell phone without BIOPRO's Cell Chip attached to it, across all individuals tested, only 11% of their key body areas measured within the ideal performance zone. The remaining 89% of their key body areas were in a weakened or stressed state. This demonstrates a significant negative effect of shifting the organism out of the ideal performance range.

After applying **BIOPRO's Cell Chip** on the phone, across all individuals tested, **87%** of their key body areas measured within the ideal performance zone. The remaining **13% of key body areas** also showed a **less stressed state** when compared to both the original baseline value and the "phone call without chip" measurement. This demonstrates a significant positive effect of shifting the organism back to its ideal performance range.

After applying the **BIOPRO's Cell Chip** on the phone, **all (100%) of all individuals tested** had a **larger percentage** of key body areas within the **ideal performance zone** than they did when using a cell phone without BIOPRO's Cell Chip attached to it, as well as when compared to being tested without a cell phone (baseline state). In summary, by comparing seven key areas of the body before and after using the BIOPRO Cell Chip, screening results showed that numeric stress values for all subjects were restored significantly closer to equilibrium. Each individual showed strengthened resistance to the effects of stress, and a dramatic increase in measurable energy.
